- **Hepatitis:** Hepatitis C, acute (1), Hepatitis C, chronic (31)

Influenza: Flu activity remains low this week. As of November 2, just over 30 cases have been reported including four hospitalizations. We continue to encourage public health to send rapid flu test positives to MTPHL for confirmation. Consult with CDEpi as needed.

The Montana weekly influenza report is available on our website:
<https://dphhs.mt.gov/publichealth/cdepi/diseases/influenza>

Potential Mumps Exposure at a National FFA Convention: CDEpi received a notification of a potential low risk mumps exposure that occurred in Indianapolis, IN on October 30th and 31st. Attendees of the National Future Farmers of America (FFA) Convention and Expo may have been exposed to an adult exhibitor at the conference while the individual was infectious. **Transmission risk in this setting is low**, however, anyone who attended the convention on these days and spent time in the FFA Blue Room on October 30-31 with compatible symptoms should be assessed for mumps infection.
