

Gallatin County Weekly COVID-19 Surveillance Report – January 28, 2022

As a supplement to the data provided on the [COVID-19 Dashboard](#), Gallatin City-County Health Department (GCCHD) will release this weekly surveillance report each Friday. The report includes additional epidemiologic data useful for understanding the current COVID-19 pandemic in Gallatin County, Montana.

Figure 1. Describes the number of daily cases and 7-day rolling average of cases per 100,000 residents in Gallatin County. Blue bars indicate daily case reports per 100,000 residents and the orange line represents the 7-day rolling average of cases per 100,000 residents from 9/1/2020 to 1/26/2022. The 7-day rolling average of daily cases per 100,000 residents was 224.4 cases per 100,000 on 1/26/2022, a 20% decrease from 279.1 cases per 100,000 on 1/19/2022.

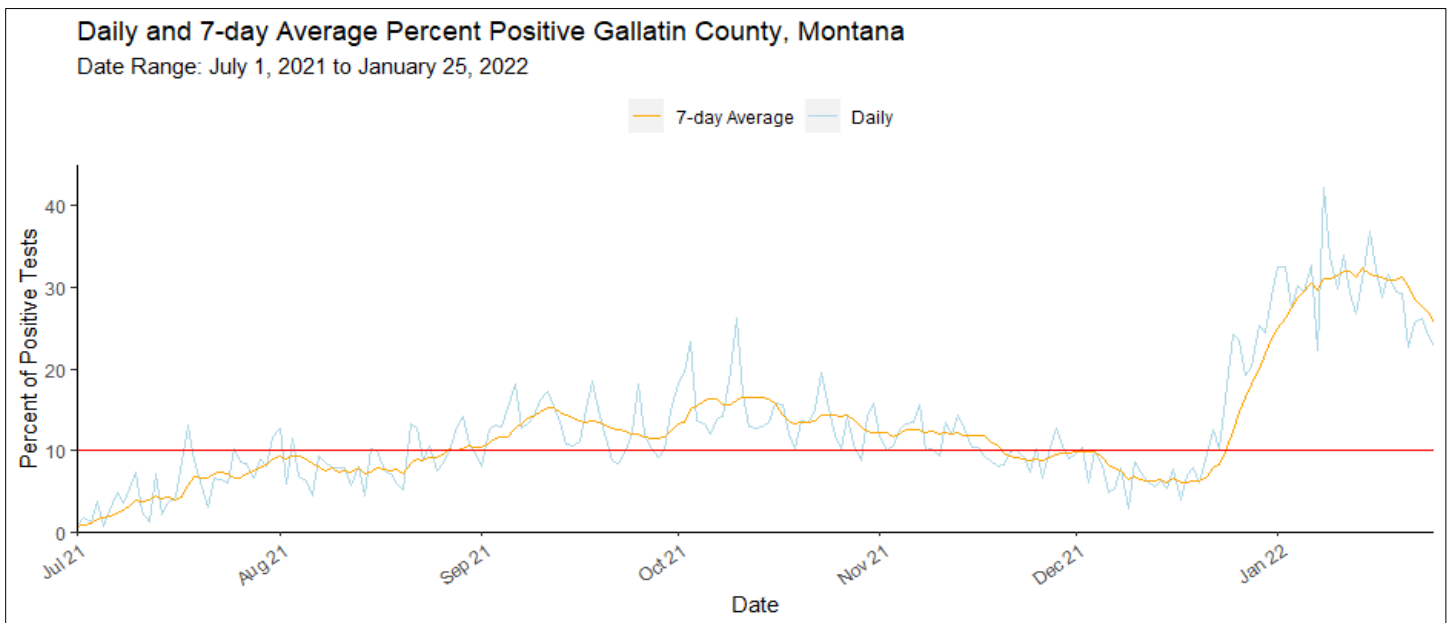

Figure 2. Describes the percent of positive tests by day and a 7-day rolling average of the percent of positive tests. The World Health Organization recommends a test positivity rate below 5% as a criteria for re-opening businesses. Public health experts say a positivity rate above 10% (red line) may mean more testing is necessary in order to avoid missing a significant number of cases in the community. The 7-day rolling average of percent positive was 25.7% on 1/25/2022, a 17% decrease from the 30.9% positivity rate for the 7-day period that ended on 1/18/2022.

Figure 3. Describes the median number of days it takes a specimen collected until the result of the laboratory test is sent to GCCHD. The orange line in the figure above denotes 2 days. These data only include laboratory tests transmitted electronically via the Montana Infectious Disease Information System (MIDIS). Ideally, local health departments receive test results within 24-48 hours of specimen collection. Consistent delays greater than that make it more difficult to slow spread of the disease through isolation and quarantine. For cases reported during the period 12/28/2021 to 1/25/2022 the median time from specimen collection to report to public health was 1 day.

Figure 4. Epidemic curve of cases residing or recovering in Gallatin County at the time of COVID-19 diagnosis displayed by date of symptom onset. Data only includes cases with onset date information reported to GCCHD between 3/17/2020 to 1/26/2022. Onset date data may be unavailable because the COVID-19 case was asymptomatic, unable to determine when symptoms started, onset date is not yet reported or the case was not responsive to public health outreach.

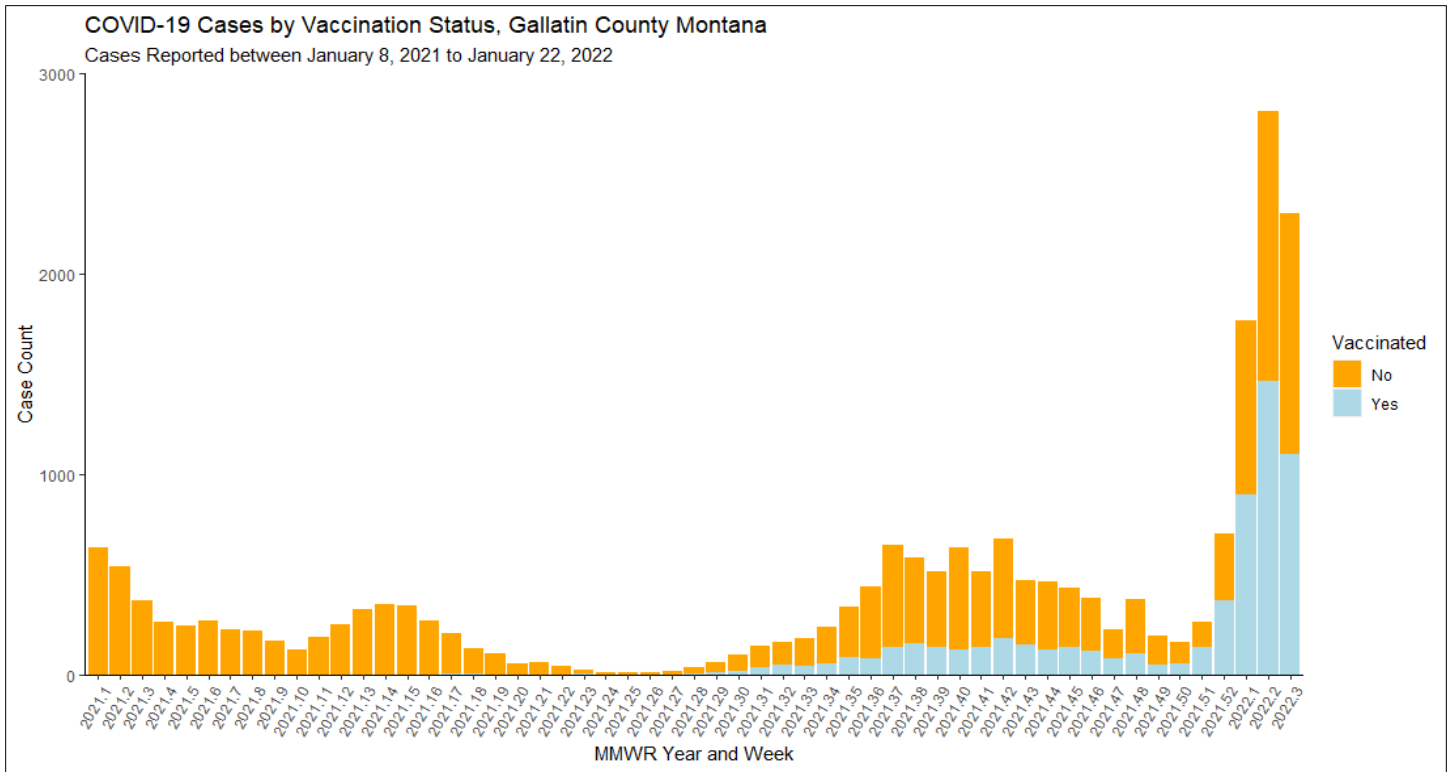

Figure 5. Describes the number of COVID-19 cases by vaccination status and [CDC MMWR Week](#) from January 1, 2021 to January 22, 2022. Light blue bars represent weekly cases counts among fully vaccinated Gallatin County residents and orange bars represent weekly cases counts among unvaccinated Gallatin County residents.

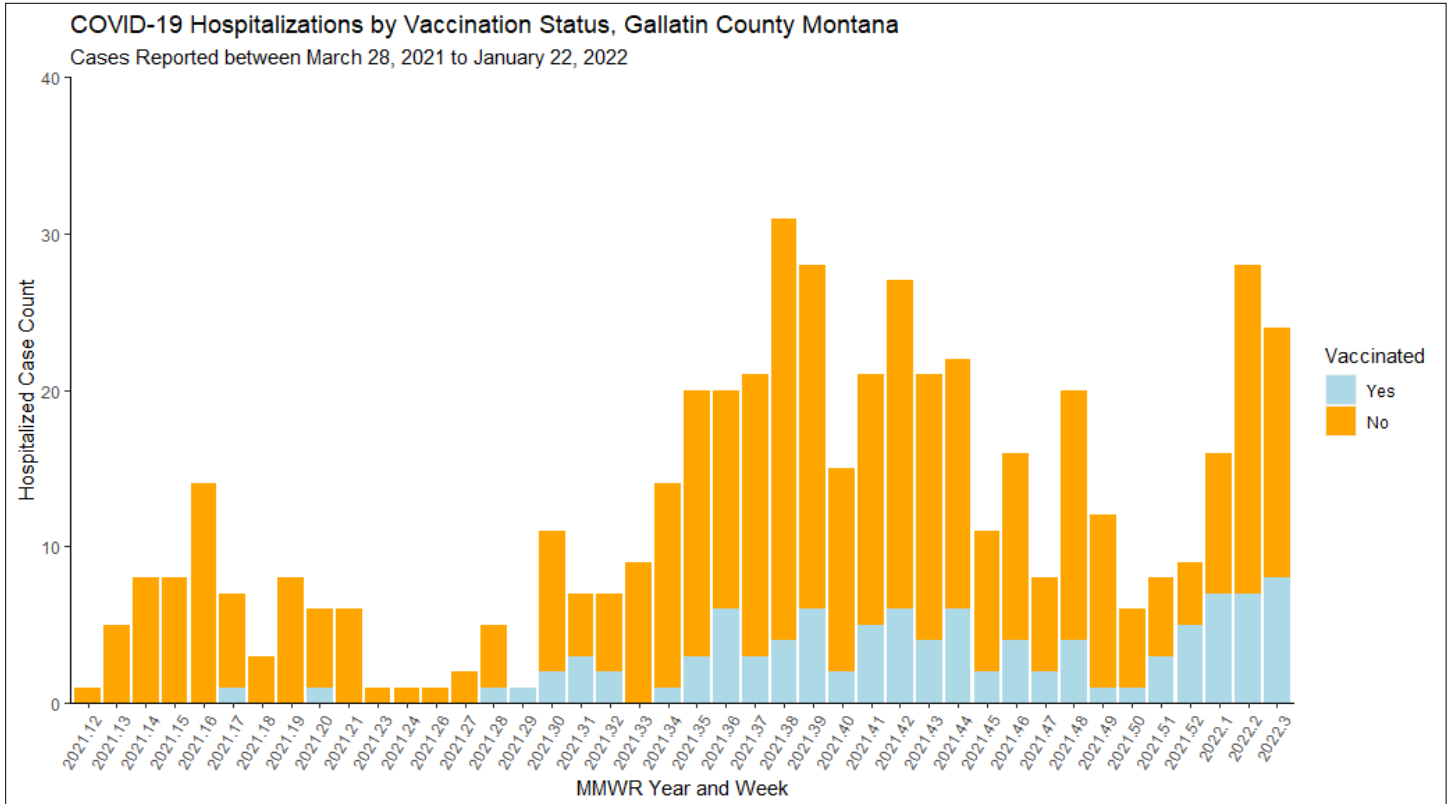

Figure 6. Describes the number of hospitalized COVID-19 cases by vaccination status and [CDC MMWR Week](#) from March 28, 2021 to January 22, 2022. Light blue bars represent weekly hospitalizations counts among fully vaccinated Gallatin County residents and orange bars represent weekly hospitalizations counts among unvaccinated Gallatin County residents.

Figure 7. Describes the percentage of Gallatin County residents by age group who are fully vaccinated with a COVID-19 vaccine. Bolded values within blue bars indicate a percent increase from the previous week.

Figure 8. Describes COVID-19 vaccine doses received by Gallatin County residents by MMWR Year and Week as of January 21, 2022.

Table 1. Describes the number of active cases per 100,000 Gallatin County residents among Vaccine Eligible Age Groups as of 1/27/2022.

Age Group	Number of Active Cases	Total Number of Residents	Active Cases per 100,000
0 to 4	126	5906	2133
5 to 11	136	9138	1488
12 to 17	109	7,616	1431
18 to 29	702	28,995	2421
30 to 39	517	17,388	2973
40 to 49	398	14,113	2820
50 to 59	265	11,667	2271
60 to 69	183	12,149	1506
70 to 79	73	6,846	1066
80+	29	2,968	977

Table 2. Describes the levels of community transmission based on the number of cases in the last 7 days per 100,000 population and the number of tests in the last 7 days that have a positive result. Gallatin County is currently experiencing “High” community transmission, as depicted by the black circle on the table below. Data regarding levels of transmission and percent of positive tests can be found at the CDC COVID Data Tracker [here](#)

Indicator - If the two indicators suggest different transmission levels, the higher level is selected	Low Transmission Blue	Moderate Transmission Yellow	Substantial Transmission Orange	High Transmission Red
Total new cases per 100,000 persons in the past 7 days	0-9.99	10-49.99	50-99.99	≥100
Percentage of NAATs ¹ that are positive during the past 7 days	0-4.99%	5-7.99%	8-9.99%	≥10.0%

Please note the data contained in the report above are subject to change as more information regarding cases and lab tests become available through contact tracing or information sharing. GCCHD reserves the right to edit the format and content of the weekly surveillance report.
