**Communicable Disease News:**

**Monkeypox Update:** As of 10/20/22, CDC and WHO are tracking 27,835 confirmed monkeypox/orthopoxvirus cases in all 50 US states and territories and additional cases worldwide that have been reported in areas that do not normally report monkeypox cases. Four deaths attributed to monkeypox/orthopoxvirus have been confirmed in the United States. There have been seven cases of monkeypox/orthopoxvirus reported in Montana. DPHHS urges providers to be alert for patients who have rash illnesses consistent with monkeypox, regardless of whether they have travel or specific risk factors for monkeypox, and regardless of gender or sexual orientation. Healthcare providers in Montana should report suspect cases to your local health dept, who will notify the CDEpi Section at [DPHHS](#). For local resources and information, such as our vaccine waitlist, visit the [Healthy Gallatin website](#).

**Influenza:** Influenza activity is low but starting early for the 2022-2023 influenza season in Montana. Season-to-date, Montana has had 25 cases, 1 hospitalization, and 0 deaths associated with influenza. Currently, Influenza A is the dominant influenza type circulating in Montana, seasonal subtypes H1N1 (n=4) and H3N2 (n=4) have both been detected early but no dominant influenza A subtype has emerged yet this season. No Influenza B activity has been confirmed yet this season.

- Influenza-like illness (ILI) in Montana remained low, but increased slightly to 1.10%. increased over Week 41, with 4.43% positivity. This is the first week where the 3% positivity threshold for RSV season was crossed, however a low number of RSV tests were reported. Two consecutive weeks of percent positivity >3% is considered the onset of RSV season.

# Gallatin County Weekly Communicable Disease Report

### Gallatin County COVID-19 Data

During MMWR Week 42 (week ending 10/22/22), 103 new COVID-19 cases were reported among Gallatin County residents. Among the newly reported cases, approximately 57% were confirmed breakthrough cases, defined as testing positive for SARS-CoV-2  $\geq 14$  days after receiving a primary COVID-19 vaccine series. As of October 22, 2022, Gallatin County reports 12,066 cases of confirmed breakthrough disease, which includes 275 hospitalizations and 29 deaths.

**Table 2.** Summary of COVID-19 Activity among Gallatin County residents reported between 3/17/2020 to 10/22/2022.

	Total	MMWR Week 42	% Change from Previous Week
Reported Cases	40,014	103	-32.68%
Laboratory Tests	335,066	354	5.67%
Hospitalizations	1,438	4	-20.00%
Deaths	132	0	0%

**Table 3.** Describes the number of active cases per 100,000 Gallatin County residents among Vaccine Eligible Age Groups as of 10/23/2022.

Age Group	Number of Active Cases	Total Number of Residents	Active Cases per 100,000
0 to 4	7	5,906	119
5 to 11	3	9,138	33
12 to 17	6	7,616	79
18 to 29	23	28,995	79
30 to 39	19	17,388	109
40 to 49	11	14,113	78
50 to 59	12	11,667	103
60 to 69	22	12,149	181
70 to 79	14	6,846	205
80+	6	2,968	202

**Table 4.** Describes [CDC community impact level](#) as of 10/24/2022, established to help determine which prevention actions are recommended based on healthcare system strain. Gallatin County is currently experiencing “Low” community impact, as depicted by the black circle on the table below. Data regarding community levels and local indicators are found at the CDC COVID Data Tracker [here](#). During periods of low impact, the CDC recommends staying up-to-date with COVID-19 vaccines and boosters, maintaining improved ventilation throughout indoor spaces when possible, and following CDC guidelines for isolation and quarantine, including testing if you are exposed or have symptoms. Individuals who are immunocompromised or at high risk for severe disease should have a plan for rapid testing if needed, and talk to their healthcare provider about whether they are a candidate for treatments like oral antivirals or monoclonal antibodies.

New COVID-19 Cases Per 100,000 people in the past 7 days	Indicators	Low	Medium	High
<200	New COVID-19 admissions per 100,000 population (7-day total)	<10.0	10.0-19.9	$\geq 20.0$
	Percent of staffed inpatient beds occupied by COVID-19 patients (7-day average)	<10.0%	10.0-14.9%	$\geq 15.0\%$
$\geq 200$	New COVID-19 admissions per 100,000 population (7-day total)	NA	<10.0	$\geq 10.0$
	Percent of staffed inpatient beds occupied by COVID-19 patients (7-day average)	NA	<10.0%	$\geq 10.0\%$
