Communicable Disease News:

- Additional summary of diseases reported in the state of Montana for MMWR Week 18:
 - **General Communicable Diseases:** Coccidioidomycosis (1), Elevated Blood Lead (1), Metal Exposure, Cadmium (1)
 - **Hepatitis:** Hepatitis B, chronic (1), Hepatitis C, acute (2), Hepatitis C, chronic (8)
 - **STD/HIV:** Gonorrhea (10), HIV/AIDS (1), Syphilis, primary or secondary (10)
 - **VPDs:** *Streptococcus pneumoniae*, invasive (1)
- **Influenza:** Influenza activity is **sporadic, but remained low** statewide from April 30th – May 6th, 2023, with 17 new cases and no hospitalizations or deaths reported. Season to date, 10,909 cases, 550 hospitalizations, and 20 deaths have been associated with influenza. Influenza A and B are circulating at low levels in Montana – Flu A seasonal subtypes H1N1 (n=199) and H3N2 (n=382) have both been detected, however H1N1 and Flu B are currently the most frequently identified. Week 18 was the first week this season where Flu B was detected more frequently than Flu A.
 - Influenza-like illness (ILI) reported in Montana for Week 18 **remained low**, increasing slightly from to 1.02% to 1.06%.
 - During week 18, RSV percent positivity **decreased** to 1.35%. Due to two consecutive weeks of RSV activity below 3% positivity, the 2022-2023 RSV season was declared over in Montana on March 11, 2023.
